

SHARx General Overview for Individuals (non-members)

Looking for a More Affordable Way to Access Your Prescription Medication?

Here's How SHARx Helps.

Many people find SHARx while searching for ways to reduce the cost of an expensive prescription. If that's how you found us, you're not alone.

SHARx works with employer-sponsored health plans to help eligible employees and their families access high-cost prescription medications through safe, cost-effective sourcing solutions and personalized advocacy.

While individuals cannot enroll directly with SHARx, many employers choose to offer SHARx as part of their employee benefits to help reduce pharmacy costs while improving support for employees who rely on expensive medications.

Our goal is simple: make accessing eligible medications easier while helping employers better manage rising prescription costs.

How Does SHARx Work?

Your Employer Offers SHARx

SHARx is an employer-sponsored benefit that works alongside your health plan.

You Receive Personalized Support

Once your employer implements SHARx, eligible members will work with our compassionate advocacy team to guide you through each step, answer questions, and coordinates your prescription journey.

Ongoing Advocacy

Our team continues to support you with prescription management, refill coordination, and communication so that you always know what comes next!

Why Isn't SHARx Available for Individual Enrollment?

SHARx partners directly with employer-sponsored health plans rather than individual consumers.

This allows employers to make SHARx available as a benefit for eligible employees and their families while helping control overall pharmacy spending for the health plan.

If your employer doesn't currently offer SHARx, you may want to share this information with your Human Resources department or benefits administrator so they can learn more about our solution.
